Introducing dacc.fund: The Coordination Hub for Gitcoin's 2026 d/acc Program

TL;DR

Following the restructuring proposal for the annual domain-specific umbrella program, we're sharing dacc.fund: the focused coordination hub and brand surface for Gitcoin's 2026 d/acc program. This post explains:

- **What it is:** A minimal microsite in the form of a memetic front door for Gitcoin's d/acc ecosystem. The domain itself carries the idea: d/acc + funding = dacc.fund.
- **Why we built it:** Without a persistent hub, every funding round resets to zero. dacc.fund is how builder relationships, institutional memory, and ecosystem momentum compound across campaigns.
- **What's coming in May:** The first campaign launches focused on AI agent coordination, one of the most underfunded problems at the frontier of decentralized infrastructure.

What is d/acc?

d/acc stands for decentralized and democratic, differential defensive acceleration, a philosophy introduced by Vitalik Buterin in 2023 and developed further since. The core idea is simple: accelerate technology, but do it selectively. Prioritize technologies that strengthen our ability to defend, protect, and coordinate rather than technologies that concentrate power or enable harm.

Bio defense, cyber security, open-source tools, better information systems, privacy infrastructure: these are d/acc. Surveillance, centralized AI control, technologies that give any single actor a decisive advantage over everyone else: these are not.

Think of it as the difference between building stronger immune systems versus bigger weapons. The goal is a world where individuals and communities have the tools to protect themselves and make their own choices without needing to hand that power to any centralized authority to do it for them. In Vitalik's framing: defense like democratic Switzerland, not like the lords and castles of medieval feudalism.

For Gitcoin, d/acc is not just a funding theme. It's an alignment of values. The same instincts that motivated open-source development, decentralized finance, and credibly neutral public goods funding point toward d/acc: build things that work best when they're open, distributed, and used to protect rather than to dominate. Learn more about the framework, explore the d/acc landscape, or get an instant d/acc diagnostic for your favorite project here.

From Restructuring Proposal to Execution

The restructuring proposal laid out the strategic direction: sunset the generalist Gitcoin Grants model and replace it with a single domain focus, d/acc, delivered through targeted monthly campaigns rather than large open rounds.

dacc.fund is how that becomes real.

It's the brand surface and coordination hub where the 2026 program lives: campaigns launch from it, builders find it, funders orient around it. The premise is intentionally minimal. The domain itself carries the idea: d/acc + funding = dacc.fund.

What dacc.fund Is (and Isn't)

dacc.fund is not a platform. It's not a DAO. It's not a new governance process.

It's a single destination for anyone who wants to understand, fund, or build within Gitcoin's d/acc ecosystem. Whether you're hearing about d/acc for the first time or you've been following the space for years, the site is designed to orient you in 30 seconds: what the philosophy is, what's currently being funded, and how to get involved.

Three questions. Three answers. Three ways in: Fund. Build. Apply.

The simplicity is deliberate. dacc.fund isn't trying to be everything — it's trying to be the clearest possible front door, so that the right people find their way in and the ecosystem keeps growing.

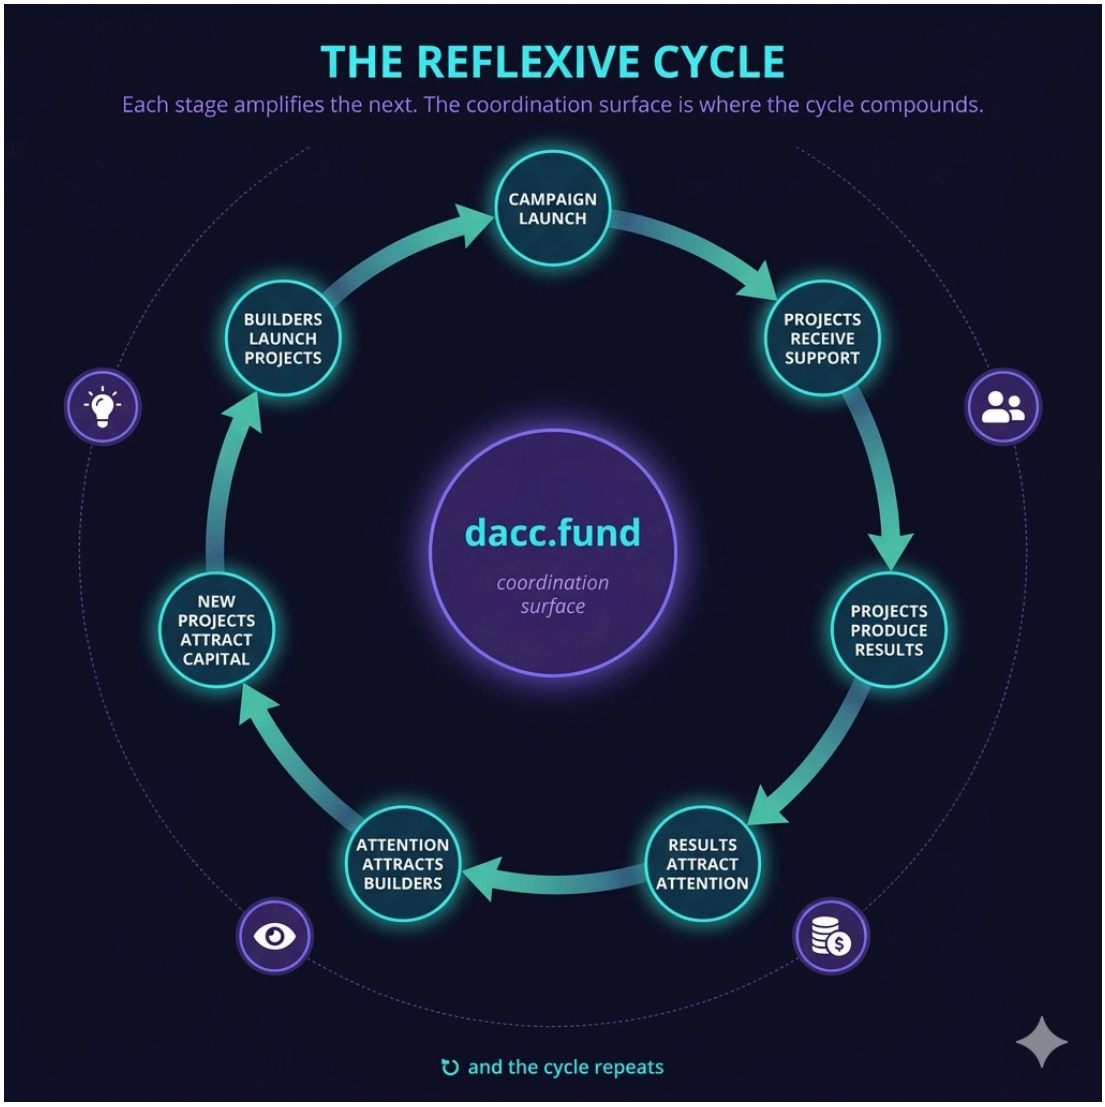
Why a Persistent Hub Matters

The deeper purpose is structural, not cosmetic.

Without a persistent hub, each funding round is a standalone event: relationships form and dissolve, institutional memory resets, and outsiders have no clear entry point. dacc.fund closes that loop.

As campaigns run throughout 2026, the site accumulates a cartography of the ecosystem: which builders keep showing up, which projects shipped, how funding flows, where communities overlap. Every campaign strengthens the whole rather than existing in isolation.

The long-term vision is a reflexive growth engine. dacc.fund is the surface where that cycle becomes visible and accelerates.



The 2026 Campaign Structure

Consistent with the proposal, the 2026 program is structured as:

- One umbrella program (dacc.fund)
- 3–5 targeted campaigns within the d/acc domain, each focused on a specific sub-problem
- Coalitional funding model, targeting at minimum a 1:1 ratio of matched capital per campaign
- An accelerator layer alongside each campaign to nurture builders and create curated deal flow
- Upside mechanisms rather than pure grant disbursement

What's Coming in May

The first campaign launches in May.

We'll share the full details in the campaign launch post, but the headline: it's focused on one of the most urgent and underfunded problems at the intersection of AI and coordination infrastructure. The question driving the campaign is not whether AI agents will coordinate; they already are, but whether they will coordinate well.

We're finalizing the campaign design, co-funder structure, and evaluation criteria now. The launch post will go live before May with everything builders and funders need to participate.

If you want an early signal:

- **Builders** working on AI agents, multi-agent systems, or coordination mechanisms: the campaign is designed for you.
- **Funders and co-investors** interested in the capital structure and co-investment model: reach out or signal interest in the comments.

What We're Asking From the Community

A few specific questions before we go live:

1. **Which d/acc verticals do you see as most underfunded right now?** The 2026 d/acc landscape map we shared in the restructuring proposal informs campaign selection. Your input helps calibrate where our capital has the most leverage.
2. **Who should we be talking to?** Co-funders, domain experts, builder communities, and institutional partners. If there are specific people or organizations we should pull into the coalitional model, name them.
3. **What are your reactions to the accelerator layer?** The idea of pairing each campaign with a short, focused builder cohort is new for Gitcoin. We'd value input on how that should be structured.

What Comes Next

- **Now:** Community feedback on this post
- **Before May:** Full campaign launch post with entry criteria, funding amounts, and evaluation framework
- **May:** First campaign goes live
